DETAILED ACTION

Allowable Subject Matter

Claims 1-25 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

Claims 1 and 25 are allowed because the prior art of record, taken alone or in combination, fails to disclose or render obvious combining multi-color interferometry with the phase diversity technique in combination with the rest of the limitations of claim. Claims 2-17 are allowed because they depend on an allowed independent claim (1).

Claim 18 is allowed because the prior art of record, taken alone or in combination, fails to disclose or render obvious combining multiple focused and defocused images via optical path length adjustment with visible indicators of displacement values using a metric in combination with the rest of the limitations of claim. Claims 19-24 are allowed, as they depend on allowed independent claim (18).

The prior art shows the phase diversity technique, which includes collecting two or more phase diverse images (one in-focus and one out-of-focus), calculating the Fourier transform of the image data, and determining the phase error based on the image data. This information is sent to a controller for fine and course adjustment of sub-aperture telescopes. The prior art does not show combining phase diversity techniques with multi-color interferometry or with collecting a series of focused and defocused images as an optical delay of one of the sub-apertures is stepped through or with generating visible indicators of the displacement value.
